

# MYCOSECURE POULTRY

*Designed to  
adsorb and  
deactivate  
mycotoxins  
and restore  
the animal's  
health*

*Restores reproductive  
efficiency*

*Repairs damage caused  
by mycotoxins*

*Improves performance*

Exclusive product of:

Import, export and sale of additives and special products for animal feed. Studies for the development of product applications.

# MYCOSECURE POULTRY

**Mycosecure Poultry** is a sophisticated mycotoxins capturer that acts **by modulating the populations of microorganisms in the digestive system**, thereby increasing the inactivation capacity of mycotoxins by the animal.

**Mycosecure Poultry** presents a wide range of action and high affinity for mycotoxins such as aflatoxin, zearalenone, T2, DON and OTA, among others.

**Moreover, its core complex helps** regenerate tissue damaged **by mycotoxins, mainly the liver and intestine** and restores the animal's defences.

Thus, **Mycosecure Poultry** attacks the root problem, removes mycotoxins, restores beneficial bacterial flora and repairs the damage caused by the attack of pathogens.

## What are mycotoxins and how do they act?

Mycotoxins are chemicals produced as secondary metabolites of fungi and have adverse effects in animals that ingest them.

The effect of mycotoxins on animal health as well as their performance and fertility can be severe and cause significant economic losses to the producer.

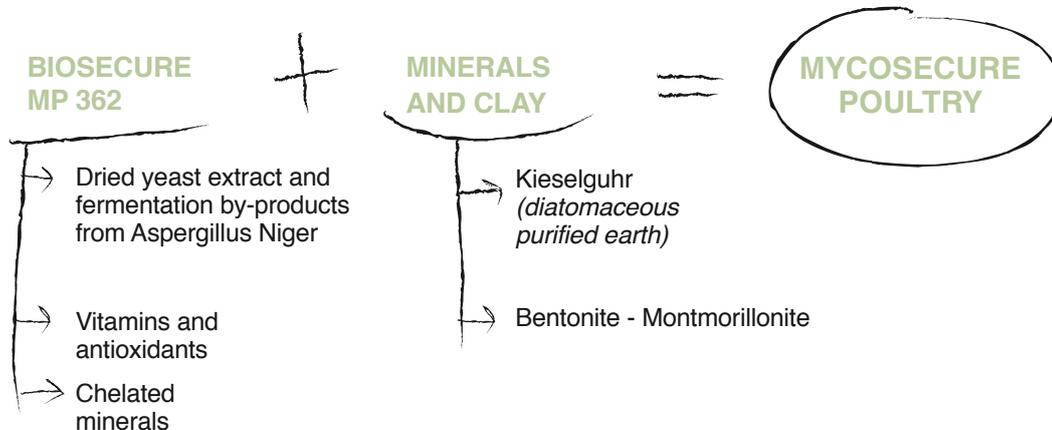

Mycotoxins can have many effects on the animal depending on the type of toxin and the amount ingested. The disease caused by mycotoxins is called mycotoxicosis.

High mycotoxin contamination produces serious problems in the health of the bird, but even low inclusions of these toxins, which can be missed clinically, affect the productivity and performance of a farm.

Affinity to all types of mycotoxin ■  
Low doses of selective inclusion ■

Wide range of action ■  
Large adsorption capacity ■

“ **Mycosecure Plus is a combination of our core Biosecure MP362 and a synergistic blend of clays (bentonite montmorillonite) and minerals** ”

## EFFECTS OF MYCOTOXIN

- ⊗ Decreased overall performance and impaired feed processing ratio
- ⊗ Tissue lesions in oral mucosa, gastrointestinal mucosa, liver and other
- ⊗ Decrease in the immune response and increased susceptibility to disease
- ⊗ Production losses

## MYCOSECURE PLUS (performance and benefits)

- ✓ Brings together and deactivates mycotoxins
- ✓ Ensures the balance of good intestinal health
- ✓ Improves feed efficiency
- ✓ Assists in the regeneration of damaged tissue, particularly hepatic and intestinal
- ✓ Improves animal health
- ✓ Immunostimulant
- ✓ Improved production and overall performance

## DOSE

Birds: 0.5 kg/t

## PRESENTATION

Bags of 25 kg
